Feather Light Product Press Release - November 2008

See and feel the lighter difference

Among SJT Medical's many leading product lines in 2008 came a dental headlight with unsurpassed comfort, delivering a continual beam of intense true white light without interruption. The Feather Light has undoubtedly presented dentists with the lightest and smallest LED Loupe light available in the UK marketplace today; and much lighter than normal fibre optic loupe lights.

With an actual weight of 4.5g (less than a quarter of an ounce) the Feather Light is very comfortable and its small size means that the dentist's vision is not impeded at any time. Combine this with the slimmest, lightest, and most advanced high capacity lithium ion battery pack, and you have a product that can provide an incredible light intensity of 39,000 lux illumination from the smallest of areas coupled with eight hours worth of consistent brightness on the highest possible setting.

The Feather Light is the only light that can comfortably fit in your original loupes case and comes complete with a two year warranty period, superseding standard life guarantees. It is also well within reach of a tight budget.

All SJT products are aimed at meeting and exceeding your dental practice requirements. To find out more about our headlights range, contact us today on 0114 272 8273 or visit www.sjtmedical.com for further information.
